SSI Projection Film Application Instructions

1. Prepare the surface on which you will be mounting the film (Glass/Acrylic).
You will require:
 - A. Your SSI Projection film cut to your size
 - B. A spray bottle (water)
 - C. A rubber blade squeegee
 - D. A cloth or rag
 - E. Scotch tape (for marking if you applying a film smaller then your substrate)
2. If your film is smaller than your substrate, mark your area with scotch tape for placement.
3. Clean the mounting surface by spraying water first (use a light detergent) over the surface.
4. Squeegee the excess water off the mounting surface.
5. Peel the release film to the middle of the sheet.
6. Spray water on the adhesive side of the SSI Projection film and the mounting surface.
7. Carefully place your SSI Projection film on your mounting surface (align with your marking tape).
8. Remove water and air bubbles (Use squeegee blade Pull from centre to edge)
9. Repeat this process for the second half of your film
10. Ensure all air bubble and water bubbles are out of the film (water bubbles become air bubbles when they evaporate)
11. Wipe off all excess water from film and mounting surface
12. Remove marking tapes
13. Check back periodically to make sure there are no air bubbles or water bubbles
